

New standard adapter with radio frequency testing technology

The product range of the company ENGMATEC will be further improved by the addition of standard RF-Test Fixtures. The competitively priced adapter bases on the adapter m/p 3522 series. Thanks to this modular design cost-effective solutions with a high level of standardisation can be realized.

The adapter can be enhanced for different frequency ranges from 430 MHz up to 3.4 GHz. This makes it possible to cover applications range from Remote control key to WiMAX products. In addition ENGMATEC's product portfolio includes radio frequency boxes, rotary transfer machines and inline systems.

At the SMT tradeshow in Nuremberg from June 08 to 10 ENGMATEC will present the new RF-Test Fixture to an audience of experts.
